Intelligence Artificielle

Definition

L'intelligence artificielle (IA) c'est la reproduction de l'intelligence humaine via un environnement informatique.

Date Historique

Actualité

Un Domaine Caché du Public

L'intelligence artificielle est un domaine caché, et les innovations demeure inconnu du public.

- https://www.biorxiv.org/content/10.1101/2022.11.18.517004v2.full.pdf

Un Domaine en perpétuelle évolution

Plus les innovations sont produites, plus le champ des possibles s'agrandit

Gymnasium is a maintained fork of OpenAl's Gym library. The Gymnasium interface is simple, pythonic, and capable of representing general RL problems, and has a <u>compatibility wrapper</u> for old Gym environments:

```
import gymnasium as gym
env = gym.make("LunarLander-v2", render_mode="human")
observation, info = env.reset(seed=42)
for _ in range(1000):
    action = env.action_space.sample() # this is where you would insert your policy
    observation, reward, terminated, truncated, info = env.step(action)

if terminated or truncated:
    observation, info = env.reset()
```

Conclusion

- 1. Un métier d'avenir et d'actualité
- 2. Encore à la genèse du domaine
- 3. Un métier de passionné
